Company Name: WayWithYou

The name WayWithYou has a two-fold nature that we hope our users will understand. The first part of the name is “Way,” which reflects the trip nature of the application. First and foremost, WayWithYou is a service that aims to enable their users to travel from point A to point B. The second part of the name is “WithYou,” which highlights the sharing nature of the site. What makes WayWithYou unique is that its users are able to plan in advance a shared ride that doesn’t bring them out of the way, but rather provides them a more affordable alternative to other “ride-hailing” applications.

Logo:

Our logo represents what our company does, which is bring people from point A to point B with the pin points. We have road motifs in order to symbolize our ride services platform, and our motto “Same Destination? Share a Ride!” ChatGPT helped us create this logo after 30 minutes of prompting a logo that is “symbolic and presentable.”

Website Search Page: WayWithYou.com

(Scroll down to next page to see our search page and for how it works)

How it works: You can search by state, where you're coming from, where you want to end up in, if there are available seats you can hop on with, and the date you want to travel.

Find ride-sharing partners for your event. Search by origination, destination, and state.

Search registrants

Enter a 2-letter state and/or origination and destination city. Search is case insensitive.

State (2-letter abbreviation)

Origination city

Destination city

Date (YYYY-MM-DD)

Taking passengers

WayWithYou – event ride-sharing

As you can see from this image, the state and city doesn't have to be capitalized (it is not case-sensitive), and you can filter by if there are available seats.

Search registrants

Enter a 2-letter state and/or origination and destination city. Search is case insensitive.

Although what makes us niche is the fact that you can plan rides ahead of time, we are planning to add: “Live section,” rides are currently live you can hop in.

Business Case:

Our company's name is WayWithYou (WWY), which is accessible through WayWithYou.com. WWY is a ride-sharing site that enables its users to plan long-distance rides, as well as, trips to highly congested locations and events in advance while aiming to decrease travel costs and maximize efficiency on the road. The user starts by entering either their origination location, their target destination, date of trip, or the time they wish to arrive by. The platform then shoots out potential ride matches that can pick them up along the way. The user is able to see available seats in the vehicle, potential different routes, and a few pickup points they can join the ride from in their origination location.

The target market for WayWithYou is people traveling to and from highly congested areas like sporting events, concerts, conferences, galas, and airports to name a few. Traveling to these locations involve a large number of people taking a large number of vehicles along the same routes to reach stadiums and buildings. Instead, WayWithYou aims to match these people together, so they can go from point A to point B in a less congested manner and save money due to splitting the cost with other passengers.

Obviously, monetization is important when starting up any company. The plan for WayWithYou to begin making money starts with charging users per ride, similar to companies like Uber and Lyft. However, the WWY model plans on charging users a cost per mile traveled, and for every mile traveled shared between x number of users, they pay $1/x$ the cost per mile. Due to the fact that people will be getting picked up along the route, it would be unfair to simply split the ride evenly among their passengers, rather they will be charged for how many miles they are in the ride for and then pay proportional to the number of passengers in the car for those

traveled miles. WWY will start by taking 50% of the money earned per ride, while the driver of the vehicle will receive the other 50% plus any tip they receive after the ride is completed. While there are many considerations to the charge of a ride, these factors include distance traveled, time, and vehicle size to name a few. On average however, the plan is to charge around \$1.50 per mile to remain competitive with other ride-hailing companies. According to <https://upgradedpoints.com/travel/how-much-does-uber-cost-per-mile/>, “the cost per mile can range from \$1 to \$2” for an Uber, but the “cost per mile varies by location, time of day, and service type.” Ultimately, the money for WWY will come from being competitive in these aspects, charging a fair price, while also highlighting the fact that users split the cost of mileage for longer rides, making the trip more cost effective and efficient. Unlike Uber and Lyft where there is also surge pricing in times where there is higher demand, because you are able to plan your rides ahead of time, you are guaranteed to get a competitive price that won’t change, despite the demand.

According to <https://www.mordorintelligence.com/industry-reports/ride-hailing-market>, the “ride-hailing market size is... USD 184.49 billion in 2026.” Companies like Uber and Lyft maintain an almost duopoly over the industry, where according to <https://emoryeconomicsreview.org/articles/2021/10/31/uber-and-lyft-a-textbook-case-of-duopoly>, these companies “own nearly 98% of it [the market].” As a result, being able to infiltrate this market, where users can now plan ahead of time and receive the same quality of ride, while experiencing far cheaper costs would enable WWY to disrupt the market and potentially control a significant portion of the market.

Lastly, as it relates to costs to run WWY. The most apparent cost is that of the driver. Due to the 50-50 split, the cost of the ride when paid by all riders is sent to the company, and then

given back to the driver. This cost will eventually be fixed when automated cars become more prevalent and usable, but for now the cost of the driver is significant. Additionally, the cost of insurance both for the driver, the vehicle, and in the future, the automated cars will be a relatively significant cost as well. Another major cost will be buying the website name and making it public, as well as keeping the servers maintained, online, and bug-free. Finally, there are some major costs as related to marketing, especially because we are attempting to disrupt such a massive industry.
